

In the Claims:

Claims 1-32 (Cancelled).

33. (New) A dual balloon catheter comprising:

an elongate catheter body having a distal end region, the elongate catheter body defining only a single inflation lumen, a first guide wire lumen and a second guide wire lumen;

a first balloon having a proximal portion bonded to the distal end region of the elongate catheter body, the first balloon disposed about at least a portion of the first guide wire lumen, the first balloon having a distal portion engaged to a distal region of the first guide wire lumen; and

a second balloon having a proximal portion bonded to the distal end region of the elongate catheter body, the second balloon disposed about at least a portion of the second guide wire lumen, the second balloon having a distal portion engaged to a distal region of the second guide wire lumen, the first balloon and the second balloon in fluid communication with the inflation lumen.

34. (New) The catheter of claim 1 wherein at least a portion of the distal end region of the elongate catheter body comprises a disc.

35. (New) The catheter of claim 2 wherein the proximal portion of the first balloon is sealingly engaged to at least a portion of the disc.

36. (New) The catheter of claim 2 wherein the proximal portion of the second balloon is sealingly engaged to at least a portion of the disc.

37. (New) The catheter of claim 2 wherein the disc is at least partially constructed of at least one adhesive.

38. (New) The catheter of claim 1 wherein at the first balloon comprises a first balloon length and the second balloon comprises a second balloon length, the first balloon length being greater than the second balloon length.

39. (New) The catheter of claim 1 further comprising a stent, the stent comprising a trunk portion and at least one branch portion, the stent having a predelivery state and a delivered state, in the predelivery state the trunk portion being disposed about a first

region of the first balloon and at least a portion of the second balloon, and the at least one branch portion being disposed about a second region of the first balloon.

40. (New) The catheter of claim 39 wherein in the delivered state the trunk portion defines a trunk flow path and the branch portion defines a branch flow path, the branch flow path in fluid communication with the trunk flow path.

41. (New) The catheter of claim 40 wherein the trunk portion further defines a secondary opening, at least a portion of at least one of the second balloon and the second guide wire lumen extending distally through the secondary opening.
